

DOINGS IN THE MINES.

THREE FAVORABLE POINTS IN THE COLORADO SITUATION.

Western Capitalists Reopening Their Eyes.—New Concentration Works Successful and More Properties For Sale. **Discovered California Resources.**

DEVCO. June 10.—Three favorable points in the mining situation in the West cannot be overlooked. The first is the steady and constant arrival in the West of prominent capitalists of the East who in previous years have invested heavily in mines which were permitted to lie idle during the years of depression, and who are now coming to view the new conditions with the expectation of reopening their mines. The second is the marked success of new concentration works, and the modern reduction plants at various points in this State which makes many mines profitable where once they were unprofitable. The third is the increasing number of dividend paying properties. The rise in silver, also, might be given as a fourth favorable sign, for the best men of the State now believe that silver will advance steadily regardless of national legislation or the slightest change in the market. Silver is becoming scarce, and is not meeting the demand. It will rise to 90 cents before the summer ends, they assert confidently.

The First National Bank this week exhibited two gold bricks from the Florence cyanide works, which were valued at \$145,000. The great reduction plant there was completed to a capacity of 400 tons of ore per day. The low-grade ores of Cripple Creek are profitably treated at that place.

The opening of the new Peck mill at Independence with a capacity of 200 tons is awaited with great interest. The great Peck mill, however, has a process that will make the low grades highly profitable, and he is now developing his mines so as to furnish a big tonnage when the Peck works are prepared to handle it. If \$10 and \$12 ore can be profitably handled there, the great Peck mill, which is in Cripple Creek ready to sell, and the number of miners in the district will be quadrupled. The new concentrating plant at Ward in Boulder county has shown such remarkable results that old camp has been having a boom unknown to its sleepy past. Idaho Springs has had a dozen new mines opened up, and is treating the ores of the district, and the result is that that camp is doing a fine business this season. Central City has a new 100-ton mill now in operation, but with such success is not yet fully known. Last week a new process was started in Colorado, and the result is that \$10 ore from Glen County at a far profit. Throughout the State other mills are in operation, and many of them are making a good record.

Some items in the progress of Cripple Creek mines are as follows: The great shipper for Carbonate Hill, northeast of town, is the Little Wells, which after four years of operation work has shown a 14-inch stratum of pay ore at a depth of fourteen feet in a new shaft, and several tons have been taken out. In a shaft which is being sunk to a depth of 100 feet, a pocket of ore was discovered in the shaft, which was valued at \$100,000. In the Little Wells, which after four years of operation work has shown a 14-inch stratum of pay ore at a depth of fourteen feet in a new shaft, and several tons have been taken out. In a shaft which is being sunk to a depth of 100 feet, a pocket of ore was discovered in the shaft, which was valued at \$100,000.

Nothing more of value was discovered until this new vein was found. Within the corporate limits of town, leases on the Hayden place this week discovered in a cross-cut thirty feet to the foot level an 8-inch vein of payable running north and south. The company by assay and averaging twelve ounces. A shipment can be made from this during the month.

The Union dividend of \$11,000 will be paid on the 25th from the returns of a \$20,000 dividend on the 25th. The directors of the Union Company are quarrelling over the management of the property, some opposing the issuing of dividends. The Elton will pay a dividend of \$10,000 on the 25th. The gross value of the property, the net value being \$40,000 on a gross value of \$50,000. During the first week of June the company shipped eight cars of ore.

Stratton has resumed work on the John A. Logan to develop the extent of the ore bodies waiting the completion of the Peck works. The company has decided to buy a \$25,000 steam hoisting plant for its new shaft. Fifteen cars of ore were shipped from Raven Hill in one day last week, five mines contributing to the total. The Moose has begun work upon a tunnel 1,225 feet long to drain the mine to a depth of 600 feet. Last month the Raven shipped 400 tons averaging \$30. Twenty-five sacks of ore from the Little returned \$20,000. The tonnage and value of ore shipped from the Victor last month was the best in the history of the property, the net value being \$40,000 on a gross value of \$50,000. During the first week of June the company shipped eight cars of ore.

Mining operations about Alma are unusually active. Alvin Body of New York has opened three old properties and has made a trial shipment to test the values under new conditions of reduced cost of smelting ores and working mines. The Phillips mine is shipping steadily and the placers have been started. The great activity in the old camp of Alma, as here outlined, has resulted in the employment of many men, and a local supply of labor is adequate to all demands.

J. E. Barbour, the thread manufacturer of Paterson, N. J., is in Idaho Springs looking after his Mayflower property, now owned to him again. A streak of lead and gray copper has been encountered, from a test shipment. The Toledo shaft, at a depth of sixty feet, revealed a six-inch streak of ore running \$200 to the ton.

New shaft buildings dot the mountain sides in every mining camp of Boulder county, and in all of these fine plants of machinery are in place, many running air compressors, and diamond drills. The old Victoria shaft at Summerville, abandoned for years, is being re-timbered preparatory to active operations. The Slide mine employs fifty men, and the Prussian just below it is doing a fine business.

A \$40,000 mine is reported in the Little Jennie, in the Magnolia district. The town of Ward has filed incorporation papers, and is now the best mining camp in the county. Pine Creek, above Central City, is having a fine time with claim jumping and town-site squabbles. Two new claims have been discovered in Central and Pine Creek to accommodate the rush. A number of good strikes are reported. A sale of the best prospect in the new gold camp west of Fort Collins has been reported made to eastern men.

At St. Elmo a new mine has been discovered, the eighty-ton new mill of the Gold and Silver Extraction Company, and the Parnett twenty-ton mill are in operation. The principal work is on Murphy Hill. The Maple Leaf, a little from the famous Mary Murphy, has a chute of ore three feet thick, which gives value by repeated assays from \$200 to \$350 per ton. The Mollie is furnishing good pay dirt and some high-grade ore. The Alpine district, Hemet, and Hancock, are attracting attention from the outside, and travel to Tin Cup via St. Elmo is quite brisk. Until this season, the fire region included these two towns, or former sites of towns, was practically deserted.

The town, at Silverton, has announced its second dividend of \$10,000 from the \$10,000 earnings of May. Only one shift in the working on the property. The new mill is daily output, which sells for about \$120 per ton of the smelter. With the completion of its train, there will be a saving of \$4.50 per ton. Two miners working last week on Bear Creek came into Silverton last night reporting that they had a ton of sylvanite ore to show for the winter's work that will run 400 ounces in gold. The ore is pocketed, and more depth will be needed fully to establish the extent of the mine. The Sunbury will expend \$125,000 in improvements this season.

At Blossburg the coal mines are now running at full blast day and night. Almost the entire output of the mine goes to the Mexican Central Railroad. There is a project on foot to build a branch line from Blossburg to Trout Springs, near Las Vegas, across the mountains. A second vein thirty inches wide, of a

superior quality of coal, has been struck twenty-two feet below the first one. In the Las Vegas a company of railroad men have found in their new mine a vein of coal that will sell at \$1.50 per ton, in copper, the quality of the mineral improves with depth.

TAHOE CITY, Idaho, June 8.—Pierce City, which is in the northern part of the State, at the foot of the Bitter Root Mountains, was, in the last few years, one of the most successful of the last few years only a few men have mined there, and the mine has been closed. The mine that crossed the creek and gulches the pay in variable gave out yet it was not until within a year or two that men commenced prospecting for quartz veins. Last year several very good gold mines were discovered, and now two mills are operating there, very successfully, with a promise of two or three more as soon as the season of good crops is over. The ore is of good grade and the ledge of good size.

The strike of the miners at the Lake of the Sun, at the foot of the Bitter Root Mountains, is 50 cents per day in the wages and allowing the men to board where they pleased. The men are now working at the mine, and the mine is making for them. Owing to the cessation of work the mine sustained considerable damage, but everything will be repaired soon, and the mine and mill working as usual. The strike was settled without any ill-feeling on the part of the company or men.

A Denver company holding an option on the Boulder mine, in the northern part of the State, has put men at work on it. Fifteen years ago this mine was worked, and the owners received \$100,000, and \$50,000 out of it in one year. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The Gold Hill mine and twenty-five-stamp mill will be sold under an order of the court on the 20th. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The strike in the Elmore gold mine, at the foot of the Bitter Root Mountains, is 50 cents per day in the wages and allowing the men to board where they pleased. The men are now working at the mine, and the mine is making for them. Owing to the cessation of work the mine sustained considerable damage, but everything will be repaired soon, and the mine and mill working as usual. The strike was settled without any ill-feeling on the part of the company or men.

SILVER CITY, N. M., June 8.—The big syndicate which is so heavily interested in mines in the Carlsbad district, in the western part of the State, has been working for some time in the district, and men are now at work on the mine. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned.

The mine was then abandoned, and the original owners had a ten-year lease on the mine, and the mine was then abandoned. NOTES OF SUMMER SHOWS.

A CIRCUS AND A FIERY SPECTACLE AT MANHATTAN BEACH.

Now the Season Is Wide Open at the Beach.—A Military Drill Shown by the Eldorado and How It Is Done. Memoranda of Plans for Next Winter.

The main amphitheatre at Manhattan Beach this summer is devoted to a spectacle called "Cubs," which may be more imaginative than accurate, but it is in any case highly diverting and fills a stirring half hour with more sensations than the most concentrated melodrama ever contained. The scenery, which is particularly impressive from the point of space and distance, resembles a public square in Havana, before a building that may be Castle Morro. On the left are the streets of the town, and on the right a stretch of country. When the action commences the population is gathered in the square. A troop of acrobats, dressed in the costume of the Spanish soldiers in Spanish costume, band their tambourines, and much to the delight of the natives, who applaud them with no apparent thought of the rebellion or its troubles. When the entertainment has concluded, the inhabitants leave the square, and are seen slowly descending from view through the streets to the left. They are numerous enough to keep the stage crowded, and in all the subsequent manoeuvres that follow there is no damage to the illusion from any lack of moving figures.

After the gathering in the square has dissipated, the scene changes to a Spanish town, and the action commences. The scene is a Spanish town, and the action commences. The scene is a Spanish town, and the action commences. The scene is a Spanish town, and the action commences. The scene is a Spanish town, and the action commences.

ALIZARINE BLUE SERGE SUITS \$12.50

Two-thirds of all Serge Suits fade if they are exposed to wear long enough.

Alizarine Serge Suits never change color. Alizarine color is a chemical product of coal tar. It enters into every fibre of the wool and becomes an actual part of it. It can never be separated from it. One quantity of Alizarine will color as much wool as ten quantities of the old vegetable dyes. A vegetable dye covers. Alizarine penetrates. That's the difference. A covering can be worn off. A penetration can not. An alizarine dyed serge may be compared to a light, flaky loaf of bread. A vegetable dyed serge is the opposite. It's thick, gummy, filled up. Sometimes the color comes off readily on the collar and cuffs.

Alizarine Serges don't cost any more—they cost less. The best Indigo dyed serges cost at least \$12.50. Alizarine Serge Suits cost \$12.50. The difference in price is as great one way as the difference in quality is the other.
